

# **Bullfrog**

***(Lithobates catesbeianus)***

**The bullfrog is one of the biggest kinds of frog. It can grow to be 8 inches and weigh 1 and ½ pounds. The bullfrog has 2 main colors green and brown. They commonly have white or yellow stomachs. They have very strong back legs that help them jump really far.**

**The large circles next to their eyes are actually their ear drums which catch sound waves to let them hear. The ear drums are much larger on male frogs.**

**Bullfrogs live in lots of habitats like ponds, rivers, slow moving streams and vernal pools. Their appetites are big and they will eat almost anything they can swallow like bugs, small fish, other frogs, and even small mammals.**

**If you want to find bullfrogs you can take the vernal pool loop trail to the vernal pool.**
